

## Our Platform at a glance

Consolidation of your security services as single-source-solution

Automation & standardization of your SecOps-processes

- Data Collection
- Data Processing
- Data Preparation

Enrichment & correlation of information from different sources with various data formats

Standardized reporting as a uniform basis for evaluation

Holistic view of your security-relevant data

Graph view to visualise correlations

Documentation of your security processes & incidents

## Your Benefits

Enable informed decisions through a holistic view of your security data

Increase efficiency & prevent resource bottlenecks through planned & standardised SecOps processes

Relieve the burden on your SOC team by automating tedious & repetitive tasks

Uncover connections between security incidents that would otherwise go unnoticed

Raise security level within your company through risk minimization

## NEXTPART IN A NUTSHELL

NEXTPART offers an enterprise security solution for **security analysts** in companies. The efficient and holistic platform **combines a variety of security services** to **link and process all security-relevant information**. Central components are the intelligent correlation algorithms and the uniform data model.

You get a **big picture** of all your relevant security data. As a result, our platform helps you to make **informed decisions** when security incidents occur.
